THE IGO STRIPING MACHINE WITH IMPACT XP PAINT

The ***IGO PAINT STRIPING MACHINE AND IMPACT XP PAINT*** can line up to 3 standard soccer fields from 1 (one) single 5 Liter Bag (1.32 US Gallons) of Impact XP Paint. The **actual cost** is **approximately \$26 – 27 per soccer field**. When using dilutable 5-gallon bulk paint, the actual cost per field is approximately \$38 per soccer field not including labor costs involved with the on-site mixing of traditional bulk paint. It takes far less Impact XP Paint to line a field.

The IGO Striper has a hopper in which you can slot three 5 Liter bags of Impact XP Paint. You can **restripe** up to 13 standard soccer fields, depending on which nozzle is selected, eliminating the need to stop and refill. **No messy clean up**. Run the last stripe with less than a half gallon of clean water to clean out the machine.

BASEBALL FIELDS –The IGO Striper and the Impact XP Paint applies a really good line **stripe not only on the grass** but on the **red clay too**. *When we were recently demonstrating in Central Florida, we carried out some demonstration on baseball fields. At the time we found that the IGO Striper and the Impact XP Paint applied a really good line not only on the grass but on the clay as well.* Unlike when using aerosol paint or any other high pressure or even airless stripers on the red clay, the IGO applies the Impact XP Paint without the blowing away the red clay. The Igo Paint Striper does not need the high pressure because of the unique nozzles which deliver a very fine atomized mist. The highly concentrated XP Paint has much greater coverage over the leaf and therefore looks brighter, sharper and crisper than any of the traditional clay based paints. The secret of the system is the highly concentrated Impact XP paint combined with a unique delivery system.

STRIPING TIME – you simply load the bags of Impact XP Paint, prime the pump with water and you are ready to start striping. If you want to have a Striper that saves time then this is definitely the one for you. The IGO Paint Striping machines and the Impact XP Paint are a fully integrated technology designed to work in tandem with each other.

STRIPE LASTING TIME – The special nozzles on the IGO Striper sprays a very fine atomized mist. This means that the difference is clear to see. Having greater coverage also means that it last a lot longer too.

Impact XP Paint may be applied during a light rain. On a sunny day, it will be touch dry in about 2 minutes and does not wash off like a standard clay/water based paint. We cannot guarantee it, but usually the Impact XP Paint will last up to twice as long as a line striped by most other paint striping machines and paints.
